

# Asset Life Cycle Management

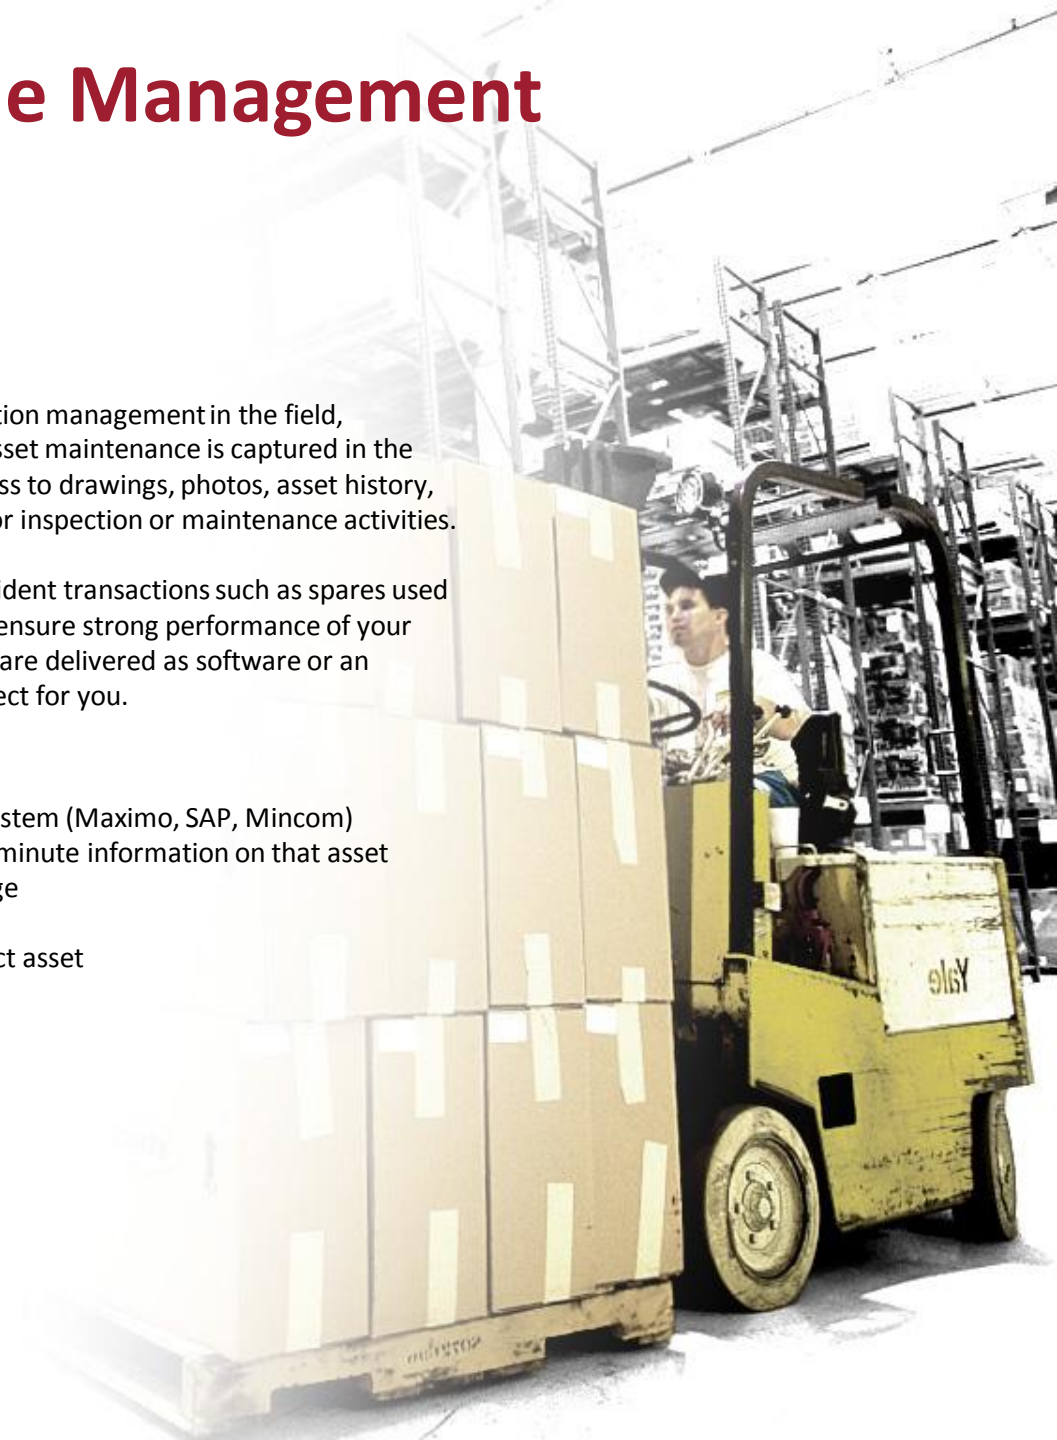

## Mobile Solution

Retriever Communications provides real time asset information management in the field, increasing productivity on site. Data relating to assets and asset maintenance is captured in the field on mobile devices, giving field workers immediate access to drawings, photos, asset history, customer information, related checklists and other details for inspection or maintenance activities.

The mobile application also handles tasking, and records incident transactions such as spares used and time spent on repairs. Information charged technicians ensure strong performance of your field assets. Retriever's mobile asset management solutions are delivered as software or an outsourced solution to ensure a flexible solution that is correct for you.

## Benefits

- Integrates directly into your asset management system (Maximo, SAP, Mincom)
- Pull previous most recent asset history for to-the-minute information on that asset
- Remove all costs associated with paper and storage
- Reduce loss of assets through tracking
- Removes issues of work being done on an incorrect asset

# Asset Life Cycle Management

## Features

### Mobility

- Dynamic Status Updates – Update job status in real-time
- Asset Data Sheets – Wireless information transfer
- Asset Maintenance Checklists – Define and manage your own checklists
- Asset Tracking – Track asset history over operational period
- Parts Management – Record parts used for each job

### Full utilization of tablet:

- Photo Attachment – Attach and send photos to jobs or assets
- Barcode/RFID Scanning – Record asset and parts serial numbers

### Asset Repository

- Asset History – All asset history is digitally recorded and stored
- Performance Reports – Generate reporting
- Photo Repositories – Store photos for retrieval and minimal data transfer
